In the section "General statistical analysis" (p. 41) it was written: "Statistica 5.5 can not be used also with Windows Server 2003 Standard Edition 32-bit (with any available Service Pack and in any "compatibility mode" – it produces error message immediately after attempt to start: "ntvdm.exe – System Error, NTVDM encountered a hard error.")".

This statement is not correct anymore. The updates for Windows Server 2003 Standard Edition 32-bit, issued by Microsoft somewhere between 2010-02-08 and 2010-11-18, have solved this problem, probably unintentionally. Now, during the first start of Statistica 5.5, installed on a new computer with Windows Server 2003 Standard Edition 32-bit with all updates installed, it produces the same error message, but, contrary to the previous situation, it works fine despite this message. During the second start of Statistica 5.5 (even after "cold start" of this computer, after its "off" state) and later this message will never appear again and Statistica 5.5 will work fine without any problem.

Finally, Statistica 5.5, introduced in 1999, can be used simultaneously with relatively new software, like Microsoft Office 2007 and the latest Adobe Acrobat, if all above-mentioned software is installed on Windows Server 2003 Standard Edition 32-bit with current Microsoft updates.
